**To improve performance, replace -1% corn by + 1% soya oil.**

For economic mixing, replace -2.5% corn by +2.5% wheat bran in layer phase. For controlled weight gain and smooth transition, mix portions of grower feed with portions of layer feed in weeks 14 and 15 (e.g. 70/30, 50/50, 30/70 and 0/100) You can also contact us for customised mixings.
